CERTIFICATIONS

Udemy Certificate of Completion: React - The Complete Guide 2024 (incl. Next.js, Redux)
Issued Sep 2024

SKILLS

Programming Languages
JavaScript, TypeScript, HTML, CSS

Frontend
React, Next.js, Redux, TanStack Query, React Hook Form, Yup, Tailwind CSS, MUI

Backend
Node.js, Strapi (headless CMS), Golang

Cloud & DevOps
AWS (EC2, S3, Elastic Beanstalk, Parameter Store), Docker, GitLab CI/CD

Testing
Jest (Unit), Playwright (E2E)

Mapping / Domain
IMDF (Indoor Mapping Data Format), maptalks

Practices & Tools
Agile, AI-assisted development, Google analytics

INTERESTS

- Frontend Development
- TypeScript
- Component-Based Architecture
- Continuous Learning in Web Technologies
- Movie
- Storyteller

SUMMARY

Full-Stack Engineer with experience developing software using React and TypeScript. Strong understanding of CSS, with proficiency in building reusable UI components and maintaining scalable frontend codebases with a focus on code quality and long-term maintainability, as well as a specialization in React performance optimization. Previously worked in video editing before transitioning into software development through continuous learning and hands-on experience. A productive team player who actively participates in team discussions and cares deeply about the business context and customer needs behind every feature, and believes in working smart by automating processes where possible.

EXPERIENCE

2025 - June 2026 — **Full-Stack Engineer**

Forviz

An indoor mapping and navigation platform serving multiple shopping malls and venues through customizable web, mobile, and kiosk experiences, along with a CMS back office.

Responsibilities

- Primary owner of frontend development for the web app (venue-webapp), and CMS back office, delivering user-facing features and enhancements.
- Acted as the team's TypeScript advocate — refining codebase standards across TypeScript, React, and project structure, guiding team members, and driving high-quality type safety.
- Contributed to the venue-service backend (built with Strapi), working through its admin UI to manage data, create database entities, update data seeders, and define Yup validation schemas for new entities.
- Extended an in-house CMS (venue-cms) by building create, update, and list pages for new features, integrating with APIs to let customers manage (CRUD) their own data through a UI.
- Resolved issues and refactored components to improve consistency and maintainability.
- Built shared core components and utility functions to support reuse across the codebase.
- Leveraged AI-assisted tooling for code optimization, technical consulting and debugging.
- Managed production deployments
- Contributed to feature planning and brainstorming sessions

Technical

TypeScript, HTML/CSS, React, TanStack Query, React Hook Form, Yup, Tailwind CSS, MUI, Node.js, Strapi, AWS (EC2, S3, Elastic Beanstalk, Parameter Store), Docker, GitLab CI/CD, Jest, IMDF (Indoor Mapping Data Format), Maptalks

2023 – 2025 — **Freelance Web Developer**

Transitioned into software development through self-directed learning while working on real client projects alongside a senior developer.

Back-office system

- Set up the project from scratch with Next.js, React, TypeScript and Tailwind CSS
- Implemented authentication with Microsoft Azure
- Built an internal design system and component library (Typography, Button, Input, Card, Modal, Table, Layout), keeping the UI consistent across the product
- Designed a type-safe typography system with 30+ variants mapped to Tailwind design tokens and semantic HTML tags

Frontend Developer — SHOUT!

- Built UI pages and forms from designs using Next.js, React, MUI and Yup, discussing UI approaches with the team before implementation

Across projects
- Gathered requirements directly from clients and iterated on features based on their feedback
- Used Git with GitHub and GitLab, with all work going through code review via merge requests
- Studied JavaScript, TypeScript, React and web fundamentals through Udemy's "React – The Complete Guide 2024 (incl. Next.js, Redux)"

Technical
TypeScript, HTML/CSS, React, Next.js, TanStack Query, React Hook Form, OAuth, Microsoft Azure, Yup, Tailwind CSS, MUI

Freelance Video Editor
Edited videos for YouTube channels while transitioning into software engineering

2019 - 2022

Video Editor
Edited 157 videos in-house for PEACHII, a YouTube channel (1.4M+ subscribers as of Sep 2022) covering two main content types: studying in the UK and lifestyle vlogs

EDUCATION

King Mongkut's University of Technology Thonburi **2014 - 2018**
Bachelor of Science - Applied Computer Science-Multimedia

Mahapruttaram Girls' School **2011 - 2013**
English — Mathematics Program
